

EDUCATION

Monash University

Jul 2024 – Jun 2026

Master's in Data Science

- Current WAM: 78%, GPA: 3.3 (Distinction)

Monash University

Jul 2019 – Jun 2023

Bachelor of Commerce (majoring in Business Analytics)

- WAM: 76%, GPA: 3.2

SKILLS

- **Programming Language:** Python, TypeScript, R, JavaScript
- **Libraries & Frameworks:** D3.js, PySpark, React
- **Database Management:** SQL, MongoDB, DBeaver
- **Others:** PowerBI, Tableau, Git, Terminal/Shell (Unix)

WORK EXPERIENCE

FoodPanda – Data Analyst Intern

Dec 2025 – Feb 2026

- Developed an XGBoost-based predictive model to identify high-risk customers, achieving 81% F1 on historical refund dispute data to enable early fraud detection.
- Addressed a heavily imbalanced dataset (~5% fraud rate) using class penalty weights and SMOTE oversampling, selecting XGBoost over Random Forest through GridSearchCV hyperparameter tuning.
- Wrote SQL queries with multi-table joins to consolidate customer, order, and delivery data, then engineered behavioural and transactional features to generate actionable fraud risk signals.
- Conducted EDA on refund dispute and customer activity patterns to surface key behavioural indicators distinguishing high-risk customers, directly shaping feature selection and model design.

Women4STEM - Data Analyst Volunteer

Sep 2025 – Present

- Automated ingestion of Zoom, Humanitix and survey data into a Microsoft Fabric Lakehouse, eliminating 3 hours of manual data entry per week.
- Designed a Power BI engagement tracker monitoring over 100 participants across attendance, engagement and progression metrics, providing a single source of truth replacing over 20 spreadsheets.
- Conducted retrospective analysis of the 2025 program data to identify trends, gaps, and improvement opportunities to inform planning and strategy for the 2026 program.

PERSONAL PROJECTS

HushNav – [hushnav](#)

A sensory-friendly navigation web application that helps noise-sensitive users navigate Melbourne CBD through personalised route recommendations.

- Developed a full-stack navigation platform using React, Mapbox GL JS, PostgreSQL, and AWS, implementing A*-based route optimization to deliver personalised route recommendations.
- Designed the data architecture and schema for geospatial, environmental, and user-preferences data for efficient route recommendations and quiet-space discovery.
- Developed a noise level forecasting model using temporal averaging to predict future environmental conditions, enabling future route planning based on predicted values.
- Designed and maintained cloud-hosted infrastructure on AWS, managing application deployment, database connectivity, and system configuration.
- Designed a fully responsive, WCAG-informed UI achieving an 82 Lighthouse accessibility score and compatibility across mobile and desktop breakpoints.

Australian Retail Trade Forecasting – [aus-retail-trade-forecasting](#)

A time series forecasting project analysing Australian retail turnover data generate forecasts for future retail performance.

- Performed EDA on a retail turnover time series, decomposing trend and seasonality components and identifying major structural disruptions affecting forecast performance.
- Trained and evaluated 5 forecasting model configurations across ETS and ARIMA families using Box-Cox transformation and differencing.
- Generated 24-month forecasts with 80% and 95% prediction intervals, demonstrating ETS(M,A,M) outperformed ARIMA for the selected retail series.

Mastodon Web Client – [mastodon-client](#)

A full-stack custom-built web client for the Mastodon social network.

- Built a full-stack Mastodon web client integrating 3 Mastodon public API endpoints with asynchronous state management and state management for real-time content discovery.
- Designed a custom responsive UI with light/dark mode support.
- Designed a fully responsive UI with light/dark mode, achieving an 82 Lighthouse accessibility score.

Melbourne Urban Heat Dashboard – [urbanheat-dashboard](#)

An interactive data dashboard visualizing Urban Heat Islands and heat vulnerability across Melbourne Local Government Areas (LGAs).

- Delivered an interactive D3.js map with 2 toggleable views and 4 chart types, allowing granular heat vulnerability exploration across all 31 Melbourne LGAs.
- Collected and cleaned 10,000+ spatial polygons from OpenStreetMap across 5 datasets to build a unified urban land use dataset for Melbourne LGA analysis.
- Implemented a Geographically Weighted Regression (GWR) model to analyze "Vegetation Cooling Effect," quantifying how different vegetation types impacts local heat indices.

ACTIVITIES

SheCodes Australia – Workshop Mentor

- Guided participants during coding workshops, providing hands-on support in web development, python basics and problem-solving.
- Encouraged women to build confidence in technology and programming.

Monash University – Introduction to Econometrics Mentor

- Led weekly Peer Assisted Study Sessions (PASS), teaching econometric modelling and quantitative analysis, including time series analysis, model selection, and probability theory through hands-on application in EViews.
- Guided students through problem-solving exercises, reinforcing lecture content
- Achieved student passing rate of 81% and satisfaction rating of 99%
